NOTE: This vigentte is optimised for longer simulation runs. Therefore the output is not as pleasant due to the fact that the dummy setas file have a running time of 5 years.

In order to use this vignette make sure to render model-preprocess.Rmd first. Either save the resulting list of dataframes as shown in data-raw/data-vignette-model-preprocess.Rmd or render both vignettes model-preprocess.Rmd and model-calibration.Rmd in the same R-instance. Of course, you can also use a personalised version of mode-preprocess.Rmd. Please make sure to add all resulting dataframes to the list of dataframes at the end of the preprocess vignette and change model-calibration.Rmd accordingly.

```
library("atlantistools")
library("ggplot2")
library("gridExtra")

fig_height2 <- 11
gen_labels <- list(x = "Time [years]", y = "Biomass [t]")

# You should be able to build the vignette either by clicking on "Knit PDF" in RStudio or with
# rmarkdown::render("model-calibration.Rmd")</pre>
```

0.1 User Input

This section is used to read in the SETAS dummy files. Please change this accordingly.

```
result <- preprocess

d <- system.file("extdata", "setas-model-new-trunk", package = "atlantistools")

# External recruitment data
ex_rec_ssb <- read.csv(file.path(d, "setas-ssb-rec.csv"), stringsAsFactors = FALSE)

# External biomass data
ex_bio <- read.csv(file.path(d, "setas-bench.csv"), stringsAsFactors = FALSE)

# bgm file
bgm <- file.path(d, "VMPA_setas.bgm")</pre>
```
